

`http://www.servername.com/rango/index/`

## Protocol and Domain Name

`http://www.servername.com/`

Project Configuration's `urls.py`

`rango/`

Rango's (you app's) `urls.py`

`index/`

```
graph TD; A["http://www.servername.com/rango/index/"] --> B["http://www.servername.com/"]; B --> C["Project Configuration's urls.py"]; C --> D["rango/"]; D --> E["Rango's (you app's) urls.py"]; E --> F["index/"];
```

The diagram illustrates the process of resolving a full URL into its constituent parts. It starts with a full URL at the top, which is then broken down into the protocol and domain name, the project's URL configuration, and finally the specific application's URL configuration.
